

Buzon Pedestal International has played a role in helping some of the major landmark projects around the world take shape:

- Burj Khalifa, Dubai
- Shaikh Zayed Grand Mosque, Abu Dhabi
- European Parliament, Brussels
- Disneyland, Paris
- National Museum, Tokyo
- Petronas Towers, Kuala Lumpur
- Marina Bay Sands Resort, Singapore

Construction of Shaikh Zayed Mosque

Shaping landmark projects worldwide

Buzon Pedestal International continues to provide base support to renowned projects around the Gulf with its durable range of products made from recycled material

Founded by engineer Claude Buzon in 1982, Buzon Pedestal International is the world leader in the manufacture and distribution of the DPH system of screwjack pedestals for the construction of raised floors, external terraces and decked areas.

Buzon pedestals are known for their robust performance (1,000 kg each), ease of use and durability. Produced from recycled polypropylene, they are adjustable in height from 14 mm to 1,030 mm, and thanks to built-in adjustability, fast and efficient installation is possible. The pedestals can be used combined with concrete slabs, granite and wooden decking among others.

A constant innovator, Claude Buzon continues to develop the product to meet the ever-changing requirements of industry professionals. The range has steadily evolved over the years, extending the scope of materials and significantly introducing the revolutionary PH5 system, Buzon's patented slope correction device. Third generation pedestals were launched in 2008 al-

Burj Khalifa fountain

lowing for a much larger number of angles and a fourth generation is expected to be launched soon.

The innovation and constant search for improvements have earned Buzon Pedestal International a global reputation and the company now operates in 38 countries worldwide. In the Gulf, Buzon has executed many major projects in a span of 12 years, working with some of the region's top construction companies. In 2006, the company decided to set up its Middle East office in Dubai in collaboration with local partner Rohmix International.

Says Middle East Operations

Manager Frank Hoffmeister, "Buzon pedestals are specified by all major consultants and we have built up a very impressive list of references. We meet the most stringent quality standards and provide full support — from the drawing board to the actual installation of the

Completed Shaikh Zayed Mosque

project."

Buzon's roster of projects include the Shaikh Zayed Mosque, Burj Khalifa fountain, Marina Walk fountain and Etisalat Head Office in the UAE; Islamic Art Museum and City Tower in Qatar; Citibank and Marriott Hotel in Bahrain; and KAUST University in Saudi Arabia among many others.

"We participate in all major exhibitions across the GCC and demand for our products continues to be strong. Our product is especially suited for the region since it can withstand high temperatures and can easily hold for up to 25 years," he adds.
